### Webinar: Can building in wood contribute to delivering the Green Deal? – a regional and city perspective

October 8th 2020 9:30-11:30 CET

With the Green Deal, the European Union steps up and sharpens its efforts to combat climate change. Its target is to have zero net emission of CO<sub>2</sub> by 2050. One of the resource intensive sectors that has been identified is construction and there is a need to find climate neutral alternative. A European strategy for sustainable built environment is expected in 2021 and the new European renovation wave and a European framework for life cycle analysis will be released this autumn.

But is it all that easy? At this seminar we try to dig deeper into both opportunities and challenges for building in wood, and to discuss the role of regions and cities in this development. We will hear about the latest EU-policy developments as well as looking closer at regional case.

### Programme

Policy context: Green Deal and wood building sector – *European Confederation of Woodworking Industries (CEI-Bois)*

#### Cases

- Regional and urban strategies for building in wood
- Wooden buildings, energy efficiency and GHG-emissions
- Supporting innovation and industrial development

Final comments - *EU Commission DG GROW (tbc)*
